Danfoss Turbocor Releases TT400 380V Compressor

Tallahassee, FL — Danfoss Turbocor Compressors Inc. announces the production release of the TT400 series compressor with 380V 50Hz and 60Hz power supply.

Similar to the other TT series compressors, the TT400 380V 50Hz and 60Hz models are oil-free, variable-speed, magnetic bearing centrifugal compressors. They use HFC-134a refrigerant for an optimum environmental solution and provide outstanding part load and full load efficiency. These compressors are lightweight, emit low sound and vibration, include self-contained intelligent controls, and utilize a small footprint compared to other compressor technologies.

The TT400 380V 50Hz and 60Hz models were designed to expand the product portfolio and provide energy efficient HVAC compressors for 380V markets such as China. The TT400 380V compressors are UL certified.

About Danfoss Turbocor Compressors:

In a world of finite energy resources, environmental focus, and converging technologies, Danfoss Turbocor's mission is to redefine lifetime operating costs for commercial HVAC systems. As the originator and global leader of the oil-free, magnetic bearing centrifugal compressor product category, the company is dedicated to the design, manufacture, marketing and support of the world's most efficient commercial refrigerant compressors. Combining industrially proven component technologies largely sourced from the aerospace industry, Danfoss Turbocor compressors promise new horizons in energy efficiency and lifetime operating costs for mid-range chiller and rooftop HVAC applications. The company has been recognized for awards by many prestigious organizations including the USA EPA, AHR/ASHRAE USA, Natural Resources Canada and the Institute of Refrigeration – England.
