New Products from Danfoss Turbocor Compressors

Tallahassee, FL — Danfoss Turbocor Compressors Inc. announces the release of the new TT500 400V 170A model, and the addition of a 170A model to the TT500 460V compressor product line.

Similar to the other TT series compressors, the TT500 400V and 460V 170A models are oil-free, variable-speed, magnetic bearing centrifugal compressors. They use HFC-134a refrigerant for an optimum environmental solution and provide outstanding part load and full load efficiency. These compressors are lightweight, emit low sound and vibration, include self-contained intelligent controls, and utilize a small footprint compared to other compressor technologies.

“The TT500 400V and 460V 170A models were designed to expand the product portfolio and provide higher capacity and better energy efficiency to HVAC compressors in high-growth markets such as Europe, Australia and India”, said Jose Alvares, Director of Product Management.

About Danfoss Turbocor Compressors:

In a world of finite energy resources, environmental focus, and converging technologies, Danfoss Turbocor's mission is to redefine lifetime operating costs for commercial HVAC systems. As the originator and global leader of the oil-free, magnetic bearing centrifugal compressor product category, the company is dedicated to the design, manufacture, marketing and support of the world's most efficient commercial refrigerant compressors. Combining industrially proven component technologies largely sourced from the aerospace industry, Danfoss Turbocor compressors promise new horizons in energy efficiency and lifetime operating costs for mid-range chiller and rooftop HVAC applications. The company has been recognized for awards by many prestigious organizations including the USA EPA, AHR/ASHRAE USA, Natural Resources Canada and the Institute of Refrigeration – England.
